NOTICE OF PUBLIC INFORMATIONAL MEETING FOR PROPOSED MAJOR UTILITY FACILITY

AEP Transmission officials schedule an open house to discuss a proposed transmission line project in Licking, Fairfield, Muskingum and Coshocton counties.

This notice corrects information contained in the public notice published on Sept. 28. The correct case number is 26-0914-EL-BTX. The previously published case number was incorrect.

AEP Transmission invites community members to provide feedback on proposed study segments for the Conesville - West Millersport 765kV Transmission Line Project. Study segments are multiple alternatives presented to determine a line route. Company representatives do not build all segments, rather, they select one route to build based on public feedback and feasibility.

The project involves:

- Upgrading approximately 50 miles of the existing transmission line within existing right-of-way to 765-kilovolt (kV) capacity.
- Constructing up to 14 miles of new 765-kV transmission line, including a portion that will connect the line to the proposed West Millersport Substation on Lancaster-Newark Road. Information regarding the proposed substation, as well as improvements to the Conesville substation will be provided at a later date.

The project will strengthen the electric system by replacing aging transmission infrastructure originally built in the 1970s with modern steel structures. Upgrading the existing transmission line in this area will improve performance, reduce the likelihood of extended power outages and enhance reliability for customers throughout the region.

To learn more about the Conesville-West Millersport 765kV Transmission Line Project and provide feedback on study segments, please join us on ***Tuesday, Oct. 13 from 5:30 to 7:30 p.m. at Tri Valley High School, located at 46 E. Muskingum Avenue in Dresden and Wednesday, Oct. 14 from 5:30 to 7:30 p.m. at The Ohio Event Center located at 2299 Cherry Valley Rd SE in Newark.*** Visitors can view detailed maps and talk with team members about the project. Both meetings will feature the same information and there will be no formal presentation. Feel free to arrive at any time during the event. You may also visit the virtual open house at **AEPTransmission.com/Ohio/ConesvilleWMP** to access project information, view an interactive map, enter our virtual open house and submit comments. ***The project team is accepting feedback through Wednesday, Oct. 28.***

AEP Transmission representatives plan to host additional open houses in early 2027 to share the proposed route corridor that the company expects to submit as part of its application to the Ohio Power Siting Board (OPSB). In spring 2027, company officials expect to file an application for a Certificate of Environmental Compatibility and Public Need with the OPSB. The application will be filed as the Conesville–West Millersport 765kV Transmission Line Project and has been assigned Case No. 26-0914-EL-BTX. The OPSB is responsible for reviewing information related to the project – including input from the public – and determines approval of the proposed project. Company officials submit a preferred route corridor to the OPSB. If the application is approved, company representatives expect construction of the transmission line to begin late 2027 and conclude summer 2030.

Please visit **AEPTransmission.com/Ohio/ConesvilleWMP** for more information. Please direct any questions or comments about this project to the Stephanie Eisenberg at 855-617-6108 or AEPTransmission@erm.com. You may send mail inquiries to the following address:
